

LOADMAXX TRAILER SCALE

The LoadMaxx trailer scale is an on-board solution for all weight sensitive trailer applications. Its trailer scale offers either a LoadMaxx base model or a LoadMaxx with ComLink model. Both products include an icon-based touch screen display, built-in LED alarm lights, and the option to store up-to-four manual calibrations.

The two scales are set apart from each other by the advanced communication features available in the LoadMaxx with ComLink. The LoadMaxx with ComLink allows trailer weights to be seen on the in-dash display of any tractor equipped with a LoadMaxx scale. When LoadMaxx Tractor and Trailer Scales are used together, advanced communication capabilities allow weights to be transmitted to the tractor's data bus, and seen on any smart device when using the LoadMaxx app.

Features & Benefits

- Dual-point calibration
- Built-in LED alarm lights
- Icon-based touch screen display
- High precision pressure sensor for weight accuracy
- Compensation for temperature and altitude change
- Reduce liability from overloading
- Eliminate trips to public scales
- Decrease equipment maintenance

Applications

Heavy Haul, Bulk Trailers, Refrigerated, Flatbed, Dump and other weight sensitive applications.
