

8 THINGS YOU SHOULD KNOW ABOUT DEF

CleanBlue™

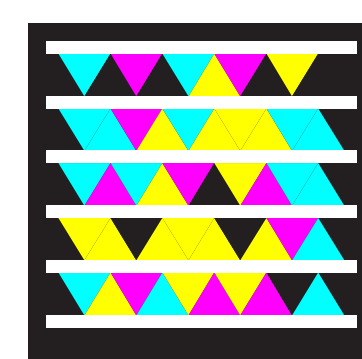

TRP CleanBlue Diesel Emission Fluid is designed and tested specifically for today's SCR systems, providing a fuel-efficient and cost-effective solution to 2010 EPA regulations. It is a non-toxic, non-polluting, non-hazardous and non-flammable DEF solution that can be used in all SCR after treatment systems, regardless of engine manufacturer. For more information go to TRPParts.com.

Available exclusively at Authorized TRP Retailers Nationwide.

- 1** Use high quality diesel exhaust fluid (DEF) to protect your vehicle's SCR system.
- 2** Use only DEF certified by the American Petroleum Institute and that conforms to ISO 2224-1 standard.
- 3** Maintain a contaminate-free DEF tank by always closing tank openings, using fill devices which are solely used with DEF and replace DEF and module filters every 200,000 miles/320,000 km.
- 4** For suspected contamination, use test strips that detect oil products in DEF; if confirmed, contact a service professional.
- 5** Store extra DEF at temperatures up to 77° F (25° C) for maximum shelf life.
- 6** Constant high storage temperatures above 90° F (32° C) may shorten the shelf life of DEF.
- 7** Store extra DEF in cool, dry, well-ventilated areas, out of direct sunlight.
- 8** The urea and water in DEF freeze and thaw at the same rate to maintain a consistent concentration.
